

MCE

Formed by the public to provide more renewable power and reinvest funds into our local economies, MCE launched in San Rafael in 2010. MCE customers eliminated more than 185,751 metric tons of greenhouse gas emissions from 2010-2015 — the equivalent of removing almost 40,000 cars from the road for one year.

MCE's standard **Light Green** service is over 50% renewable, while our elective **Deep Green** option is 100% renewable energy. Both options represent a significant reduction in greenhouse gas emissions and dependence on fossil fuels – all at comparable rates. Half of the revenue generated by the Deep Green premium is used to fund the development of new, local renewable energy projects like MCE Solar One in Richmond, the Bay Area's largest publicly owned solar farm.

MCE provides service to 255,000 California customers in Marin County, Napa County, and the cities of Benicia, El Cerrito, Lafayette, Richmond, San Pablo, and Walnut Creek. In April, MCE begins service to unincorporated Contra Costa County, and to Concord, Danville, Martinez, Moraga, Oakley, Pinole, Pittsburg, and San Ramon. By choosing MCE, customers help support new in-state and local renewable energy projects and jobs.

Seven local renewable energy projects are currently built, under construction, or soon to be developed within MCE member communities. Marin's largest solar project is the San Rafael Airport, built in 2012 under the MCE feed-in-tariff program. MCE also offers generous added benefits for customers with rooftop solar installations.

Additionally, to help business customers save on their utility bills, MCE offers rebates and low-cost financing options that can be repaid through your monthly PG&E bill, helping to incorporate energy-efficient, sustainable practices that will have your business running smooth and green.
