FLORAL PARK

The LIRR Expansion Project from Floral Park to Hicksville, one of the region's most significant transportation infrastructure projects, is now underway throughout the communities along a nearly ten mile stretch of mainline track.

During the remainder of the month of July, you will see construction crews performing work in Floral Park. Specifically, there will be crews performing soil analysis tests; conducting pre-construction inspections of the existing conditions of structures surrounding worksites; maintaining the grounds at the substation on Plainfield Avenue; and ensuring that any disturbed rodents and pests are controlled; . A temporary field construction yard has also been set-up at the corner of Lily Street and Carnation Avenue. By way of explanation:

Existing Structure Survey

- Property located within a specified radius of anticipated construction work requires a pre-construction photo inspection
- The survey is conducted to ensure the property is protected in the unlikely event of any damage
- Vibranalysis Inc., an independent consulting firm, will perform the survey
- Inspection consists of photographs and written documentation, recording the existing conditions of the interiors and exteriors of the structures surrounding the site

Rodent and Pest Control

- Clearing and preparing property for construction may cause the natural habitat of some rodents and other pests to be disturbed
- We are aware of this and are taking all of the necessary steps to minimize any impacts this may have on you or adjacent LIRR property
- We will deliver effective rodent and pest control, while at the same time minimizing the volume and toxicity of pesticides used by incorporating tamper-proof stations that limits any pesticides used to inside the stations
- Control techniques include a combination of pest monitoring, good sanitation practices, education, appropriate solid waste management, and the use of pesticides, when warranted, according to application techniques

A better commute • Less congestion • Cleaner air • Safer, quieter crossings
Station improvements & parking • Better jobs • Stronger economy • Noise reduction

Temporary Field Construction Yard

- At the corner of Lily Street and Carnation Avenue, 3TC has established a temporary field construction yard, which the construction team is utilizing for equipment and supplies

Soil Analysis Tests

- Soil analysis testing evaluates the characteristics of the soil where construction will occur and will reveal any contaminants that may be present
- Should contaminants be found, the construction team will ensure safe removal and transport of the contaminated soil to the appropriate disposal facility

Substation Property Maintenance

- Crews will maintain the property at the substation located on the west side of Plainfield Avenue, between Terrace Avenue and Stewart Street
