I/O Technologies, southeastern Wisconsin's premier source for custom software and software support solutions, is celebrating 25 years of software development and programming for clients in Wisconsin, across the U.S. and around the world. I/O Technologies provides tailored software that simplifies day-to-day business activities, and gathers, transfers and reports key business information – all of which lead to better decisions and lower operating costs. Its customized software solutions provide a reliable alternative to off-the-shelf packages that might – or might not – perform as needed.

I/O Technologies also provides support for legacy software products, especially Fox Pro, that many companies still use. Older software applications frequently don't transfer over to new or upgraded equipment systems. Rather than having to purchase an entirely new software suite – read, expensive – I/O Technologies can usually design a cost-effective solution to continue using the legacy software.

I/O Technologies has three programmers on staff (including Dave Martin), each averaging 12 years of experience. Its small size allows quick response to customers' questions and requests, and the ability to provide high-quality programming services at a reasonable cost.

The Milwaukee Business Journal has included I/O Technologies for several years in its "Largest Milwaukee-Area Software Product Companies" list. I/O Technologies offers a free initial consultation for all projects. Its talented team works closely with clients throughout the software development lifecycle to ensure satisfaction with their new software. More information is available at www.iotechno.com, or by calling (262) 437-3239 x 101 and ask to speak with Dave Martin, the company's CEO.

I/O Technologies is a longtime member of the Germantown Area Chamber of Commerce. We believe it is our civic duty to support the Chamber. And by supporting the chamber, we are in turn supporting both the community and other local businesses. The relationships we have made with the members of the Chamber are relationships that we either use, work with, or are happy to recommend when we are called on for advice or recommendations.
