

Company name: Greenfield Energy LLC
DUNS number: 82-655-0274
Address: 213 Seacrest Drive, Wrightsville Beach, NC 28480
Point of Contact: Floyd Price
Phone number: 910-619-0256
Email address: greenfieldenergy@earthlink.net

Who We Are:

Greenfield Energy, established in 2007, sells and installs electric generating equipment for agricultural, small business and large residential applications. We also sell irrigation equipment and supplies for agricultural applications. We perform maintenance and repair services for the equipment we sell and other similar equipment. We also provide energy consulting services including energy supply and efficiency recommendations.

Greenfield Energy is owned and managed by Robin Spinks. Robin is a former Vice President of Marketing and Project Development for Cogentrix Energy. For 10 years she developed coal and gas-fired power plant projects in the 80 to 800 MW size range for the independent power company. The Cogentrix projects were both cogeneration, selling steam to manufacturers and electricity to utilities, and wholesale power production facilities. Robin also owns Greenfield Development Company which is an economic development consulting firm. In this capacity she performs site selection consulting for manufacturing facilities and large power projects, including renewable energy projects. Robin has worked on projects in over 35 states.

Greenfield is operated by Floyd Price who also provides all technical services. Floyd has been in the specialty equipment sales and service field for more than 40 years and was formerly the owner/operator of Price Power. Floyd has particular experience in generator and pumping applications for remote locations, such as farms and facilities in the Bahamas and other islands, where extreme reliability is critical. Floyd is an expert in assessing the load requirements, and recommending appropriate equipment for the project goals and mission. Floyd's projects have ranged in the 5 to 500kW size range.

Greenfield is the regional distributor for generators manufactured by Grandwatt. We are also the manufacturer's representative for generators manufactured by Pivot Power. However, we also source and sell on a wholesale or retail basis, from any other manufacturers depending on the project needs. Depending on the project and application, we subcontract with local electricians when a license is required for some portions of the installation. Our specialization is in project management, applications analysis and hands-on diagnosis; but we provide a full service project completion with selected subcontractors.

Recent Projects:

NC DOT – (as subcontractor to Battlecat Productions) - 12 generators (gas and diesel units 10 to 200 kW) and automatic transfer switches for several of NCDOT’s road repair locations. Greenfield’s responsibility was to choose the equipment provider(s), purchase, deliver and provide training on the generators.

NCDOT – 10 light towers

NC Emergency Management – 3 generators for Central and Western Branch facilities (55kW) and the Burlington Civil Air Patrol (75kW)

NC Ports – mobile generator for the Port of Morehead City (100kW)

Generator sales and installations to home locations, 12 to 125 kW

Generator and pump sales and installations to agricultural projects, 25 to 300 kW

Generator sales and installations to commercial applications (including - sewer lift station, exterminator, restaurant, radio station, country club, funeral home, doctor’s office, nursing home, food processor, school), 10 to 125 kW

Designed and installed a self-contained microgrid - 8kW solar photovoltaic panel array, inverter system, automatic transfer switch and 30kW diesel standby generator connected to 5 separate structures on a 10,000 acre hunt club in Eastern NC.

Many generator, pump and irrigation repair projects
