BioNetwork Impact

STEM PIPELINE DEVELOPMENT
INDUSTRY TRAINING
Preparing NC’s new and incumbent workforce

We deliver courses, certificates, workshops, and company-specific skill development in biomanufacturing, pharmaceuticals, food, beverage, and natural products. Programs are delivered at a company’s site, online, at a BioNetwork facility, or at any of our 58 community colleges.

STEM OUTREACH
Developing the workforce of tomorrow

Our STEM (Science, Technology, Engineering, & Math) programs align educational outcomes with industry skills to provide students and faculty with engaging hands-on experiences. Programs include student labs, faculty development workshops, and facilitation of professional learning communities (e.g. NC/ABI*).

INSTRUCTIONAL SUPPORT
Meeting industry’s 21st century training needs

We provide instructional and graphic design, video production, animations, 3D simulations, and eLearning resources for students, teachers, and industry trainers. We also manage multiple websites in support of life science and economic and workforce development initiatives.
