

KENTUCKY REC SERVICES

Kentucky Regional Extension Center offers a wide range of Practice Transformation services tailored specifically to meet the unique needs of your organization.

MACRA INDIVIDUALIZED ASSISTANCE

There are significant changes to physician payments that are now tied to quality and value. We will support healthcare providers as they navigate the changes under the Medicare Access and CHIP Reauthorization Act (MACRA) and Value-Based Payment. We will provide: personalized education, in-depth gap analysis and action plan, monthly meetings, and registration and attestation support.

MEANINGFUL USE

Successfully navigating the complex and evolving Meaningful Use landscape can be a daunting task. We have a track record of helping providers make progress toward compliance in the most efficient and effective way, which translates into lower costs of implementation, assurance of maximum reimbursements, and protection against penalties and costly audits. We will provide: eligibility determination and registration support, eQOM/PQRS review and alignment, action plan and recommendations, attestation assistance, and ongoing guidance on requirements and timelines.

MEANINGFUL USE MOCK AUDIT

An eligible professional, eligible hospital, or critical access hospital attesting to receive an incentive payment for the Electronic Health Record Incentive Program may be subject to a Meaningful Use audit. We offer a mock-audit service that will help evaluate your level of preparedness so that when you are audited, you are ready.

HIPAA SECURITY RISK ANALYSIS

All healthcare organizations, regardless of their size, are required to safeguard the confidentiality, integrity and availability of protected health information in any form. We will provide an accurate and thorough assessment of the potential risks and vulnerabilities to the confidentiality, integrity and availability of electronic protected health information held by your organization.

HIPAA PROJECT MANAGEMENT

Based on the results of your SRA, we will identify and review your high and medium vulnerabilities for compliance with HIPAA requirements. This will consist of a step-by-step remediation process including planning, executing, and managing workflow related to creating policies and procedures, reviewing them and approving through designated change management teams. This includes follow-through with the remediation process until vulnerabilities are resolved.

PATIENT CENTERED MEDICAL HOME & SPECIALTY PRACTICE

We will provide a practice transformation program designed to assist your practices' application for Patient-Centered Medical Home and Specialty Practice recognition. This service includes: education on standards and best practices, gap analyses and action plans, documentation review and feedback, advice on overcoming transformation barriers, guidance on application and submission process.
