

Alden Braul
Organic Hemp Production Specialist
Hemp Production Services
alden.braul@hempgenetics.com

Alden works for Hemp Production Services (HPS) as their Organic Production Specialist. Providing organic agronomy advice to growers from field selection to post-harvest management is central to his role in the company. Given the importance of fertility in organic hemp production, he also designs and manages organic hemp research trials to help growers improve their yield.

Alden grew up farming in southern Alberta growing alfalfa seed and managing leafcutter bees. Aside from this practical farming experience, he holds a B.Sc in Agriculture from University of Saskatchewan and a M.Sc. focusing on cover crops from the University of Manitoba. His role prior to employment with HPS was managing organic research trials at the University of Manitoba.
