

William May
Research Scientist,
Agriculture and Agri-Food Canada

William (Bill) May was born and raised on a family farm growing pedigree seeds and beef cattle near Belleville, Ontario.

He obtained a B.Sc. and M.Sc. from the University of Guelph. He conducted research on alfalfa seed production at Melfort, SK from 1994 to 1997. In 1997, he began working at Indian Head, SK for Agriculture and Agri-Food Canada conducting agronomic research.

Bill is currently conducting agronomic research on hemp, canaryseed, oats, barley, wheat, field pea, soybeans, lentils, chickpea, canola, flax, sunflowers, annual forages, quinoa, camelina, niger, coriander and fenugreek. Bill splits his research into fertility management, agronomic practices, pest management and crop rotations/sequences.
